

Matteo Davoigneau

End-to-end engineering, from front-end to infrastructure, AI agents to audit logging.

Master's-qualified engineer building automated workflows and data-driven tools – React/TypeScript front-ends through to APIs and infrastructure. Strong at analysing processes, designing reliable systems and delivering end-to-end solutions. At a licensed Sydney brokerage, shipped **16 systems** into users' hands in six months, recovering **~670 hours a month** by the teams' own count.

EXPERIENCE

Full-Stack & AI Engineer · Rivkin Securities, Sydney

Feb 2026 – Aug 2026

- Shipped 16 systems into production in six months across Funds, Private Wealth, Advisory, SMSF, Compliance, Marketing and Operations, recovering **~670 hours a month** of staff time (reported by the teams themselves) on roughly **\$190/month** of infrastructure.
- Rolled **Claude** out to ~30 staff – learning each team's work first, then shaping its setup around it: knowledge projects built from its own procedures, a Claude Code starter configuration, and firm systems exposed as live tools over MCP.
- Built with the teams, not just for them – requirements gathered directly from five business units, review gates instituted through the firm's AI-delivery governance (which I owned), and internal training I led on AI-assisted delivery for technical and non-technical staff.
- Built the front-ends in **React 19 / Next.js 16 / TypeScript** – a reusable component system (shadcn / base-ui) shared across products, data-dense admin dashboards, multi-step forms with auto-save, and SVG-based data visualisations, tuned for fast loads (standalone builds, route-level code-splitting).
- Wired those UIs to live data – REST / OAuth API integrations, SQLite / PostgreSQL and an OAuth 2.1 Claude MCP server – with auth, audit logging, encrypted backups and human-review gates wherever sensitive data is involved.
- Core stack: Next.js 16 / React 19 / TypeScript, Python, AWS Lightsail + Caddy, GCP, Anthropic Claude API + MCP, with Playwright E2E test suites wired into CI/CD.

Automation Engineer Contractor · iRep, Bordeaux & Paris

2025

- Turned a manual, error-prone government repair-incentive workflow into a near-instant compliant pipeline – data aggregation across Sheets / CRM / gov APIs, OCR for serial-number extraction, rule engines for eligibility and payout validation. **~80% less processing time; currently saving €200k/yr (~A\$330k).**

Software Engineer Apprentice · Orange (Telecoms), Bordeaux

2022 – 2024

- Built an internal behavioural-analytics platform on Elasticsearch (see Selected Work) – dashboards and diagnostics the team adopted in place of tribal-knowledge troubleshooting, pending formal sign-off.

Founder · Repairoo, Bordeaux

2020 – 2025

- Ran a handheld-device repair business end-to-end – acquisition, delivery, invoicing, VAT/compliance – and learned firsthand where real-world processes break.

EDUCATION

Master's, Digital Sciences & Management (MIAGE) · Université de Bordeaux

2022 – 2024

Honours – Distinction average

Standout grades: Mobile App Development 16.5/20, Databases 16.7/20, English 18.9/20.

Bachelor's, Computer Science & IT Systems (MIAGE) · Université de Bordeaux

2019 – 2022

Honours – Distinction average

Top of graduating class

Standout grades: Programming (C) 18.6/20, Probability & Statistics 16.7/20, Finance 17/20, Business English 19/20.

RIVKIN · FUNDS ADMINISTRATION

Wholesale Unit-Trust Administration

The firm’s first fund-administration system, live on AWS with six funds on its register: applications from intake through AML/KYC to settlement at a forward price, FSC-17 unit pricing, and distributions down to the bank payment file. Compliance lives in the schema – every movement posts a balanced journal, and settled history is append-only.

150 hrs/mo saved Python Flask SQLite

1,500+ tests

RIVKIN · PRIVATE WEALTH

Private Wealth Proposal Dashboard

Build, store and export client investment proposals across asset classes and private-credit blends. Replaced both a legacy `.xlsx` workflow and the PDF proposals previously built by hand in Canva – now the team’s single source of truth.

120 hrs/mo saved Node + Express SQL PDF / PPTX

RIVKIN · FIRM-WIDE

Team Planner + Claude MCP

Scheduling for the whole firm – leave, hot-desking, room bookings and intraday events. An **OAuth 2.1 Claude MCP server** exposes it as live tools, so anyone can query availability and book in plain English from Claude.

40+ users Next.js 16 SQLite OAuth 2.1 MCP

RIVKIN · SMSF & COMPLIANCE

SMSF-AI

Privacy-first *local* AI agent that helps the SMSF team find answers across their documents in seconds – running fully on-device, so sensitive company data never leaves the building.

120 hrs/mo saved Python Ollama Qdrant FastAPI

RIVKIN · MARKETING

Landing Platform

A full-stack engine: per-campaign copy, theme and forms, immutable slug-as-route URLs, automatic CRM sync and lead tracking, per-campaign E2E tests and auto-deploy. IT can spin up a new page in about an hour.

50 hrs/mo saved Next.js 16 ActiveCampaign AWS SES

CI/CD

PERSONAL PROJECT · NSW MP’S OFFICE

AI Email Router

An AI assistant for a NSW MP’s office: staff forward an email to a dedicated address and it drafts a reply in the MP’s tone and sets up diary entries automatically, with no further human step – freeing the team to spend more time on constituents.
